

## USADA DCO Coronavirus Protection Precautions

1. USADA DCOs and other sample collection personnel are **regularly tested for COVID-19**.

2. Before this sample collection session, your USADA DCO completed a **health evaluation questionnaire**, which is required each day that they test for USADA and further determines their clearance to conduct the assignment.

3. **Please inform your DCO if:**

- You or anyone in your household is currently infected with the COVID-19 virus as confirmed by a diagnostic test.
- You or anyone in your household is experiencing any symptoms consistent with the COVID-19 virus (e.g., fever or chills, cough, shortness of breath or difficulty breathing, fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, congestion or runny nose).
- You are currently quarantining due to close contact (per CDC guidelines) with someone who has COVID-19.

4. If you feel more comfortable completing the sample collection process at a different location than where you are notified, **you can request to relocate to another location**.

5. During this sample collection session your USADA DCO and other sample collection personnel present will be **wearing a mask at all times**.

6. During this sample collection session your USADA DCO and other sample collection personnel present will be **wearing a face shield after notification has occurred**.

7. After notification, you, your USADA DCO and any other sample collection personnel present will need to **wash your hands with soap and water**. Hand sanitizer may be used, and will be supplied by your USADA DCO if soap and water is not available.

8. During this sample collection session your USADA DCO and other sample collection personnel present will **practice social distancing** to the extent possible, consistent with the testing location.

9. Your USADA DCO is equipped with disinfectant and will be **disinfecting all surfaces** on which collection equipment is placed, any mutually used items, and the iPad on which information about the sample collection session is collected. If documentation is completed on paper, your USADA DCO will disinfect the pen prior to each use or provide you with a separate disinfected pen.

10. While the CDC notes that regular use of hand sanitizer is more effective than the use of gloves, your **DCO may also wear sanitary gloves** at times when they are not using the iPad for data entry.

11. At the end of the test session, your USADA DCO will **discard all trash and disposable PPE items** in the provided trash bag and **disinfect the processing station** before leaving.
